SwissProt_41:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Green B.N., Altken A.;

"Novel isoforms of CaBP 33/37 (annexin V) from mammalian brain:

"Novel isoforms of CaBP 33/37 (annexin V) from mammalian brain:

"The structural and phosphorylation differences that suggest distinct blood cal roles.";

Biochim. Blophys. Acta 1160:76-83(1992).

"HOLOGICAL THIS PROPEIN IS AN ANTICOAGULANT PROTEIN THAT ACTS AS AN INDIRECT INHIBITOR OF THE THROMBOPLASTIN-SPECIFIC COMPLEX, WHICH IS INVOLVED IN THE BLOOD COAGULATION CASCADE.

"SUBUNIT: MONOMER. BINDS ATRX (By similarity).

"I- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.

"I- SIMILARITY: GELONGS TO THE ANNEXIN FAMILY.

"I- SIMILARITY: Contains 4 annexin repeats.
                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for

FUNCTION: THIS PROTEIN IS AN ANTICOAGULANT PROTEIN THAT ACTS AS FUNCTION: THIS PROTEIN IS AN ANTICOAGULANT PROTEIN THAT ACTS AS INDIRECT INHIBITOR OF THE THROMBOPLASTIN-SPECIFIC COMPLEX, WHICH IS INVOLVED IN THE BLOOD COAGULATION CASCADE.
SUBBUNIT: MONOMER. BINDS ATRX (By similarity).
DOMAIN: A pair of annexin repeats may form one binding site for each clum and phospholipid.
SIMILARITY: BELCOMGS TO THE ANNEXIN FAMILY.
SIMILARITY: CONTAINS 4 annexin repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SMART; SM00335; ANX; 4.

J. Meurochem. 67:89-97(1996).
-1- FUNCTION: THIS PROTEIN IS AN ANTICOAGULANT PROTEIN THAT ACTS AS
AN INDIRECT INHIBITOR OF THE THROMBOPLASTIN-SPECIFIC COMPLEX,
WHICH IS INVOLVED IN THE BLOOD COAGULATION CASCADE.
-1- SUBUNIT: MONOMER. Binds ATRX and DNWT1.
-1- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
                                                    calcium and phospholipid.
SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
SIMILARITY: Contains 4 annexin repeats.
                                                                                                                                           , M21730; AAA41512.1; -, D42137; BAA07708.1; -, D42129; BAA07708.1; -, D42130; BAA07708.1; -, D63137; BAA07708.1; -, D63137; BAA07708.1; -, JOINED.; D42131; BAA07708.1; -, JOINED.; -, D42132; BAA07708.1; -, JOINED.

CC '-- FUNTION: COLLAGEN BINDING PROTEIN.

CC Calcium and phospholipid.

CC '-- SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.

CC '-- SIMILARITY: Contains 4 annexin repeats.

044B31AC28164CE2 CRC64;
                             calcium and phospholipid.
SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
SIMILARITY: Contains 4 annexin repeats.
                                                                                                                                                                                                                                                   Annexin; Calcium/phospholipid-binding; Repeat.

FUNCTION: CALCIUM/PHOSHOLIPID-BINDING PROTEIN WHICH PROMOTES
MEMBRANE FUSION AND IS INVOLVED IN EXOCYTOSIS (BY SIMILARITY).
-!- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-!- MISCELLANEOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY

-1- FUNCTION: CALCIUM/PHOSPHOLIPID-BINDING PROTEIN WHICH PROMOTES MEMBRARME FUSION AND IS INVOLVED IN EXOCYTOSIS (BY SIMILARITY).

-1- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.

-1- MISCELLANBOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY.

"Characterization, cloning and expression of the 67-kDA annexin from chicken growth plate cartilage matrix vesicles.";

Blochem. Biophys. Res. Commun. 197:556-561(1993).

-I- FUNCTION: MAY RASSOCIATE WITH CD21. MAY REGULATE THE RELEASE OF CA(2+) FROM INTRACELLULAR STORES (BY SIMILARITY).

-I- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

LI FUNCTION: THIS PROTEIN IS AN ANTICOAGULANT PROTEIN THAT ACTS AS AN INDIRECT INHIBITON OF THE THROMBOPLASTIN-SPECIFIC COMPLEX, WHICH IN THE BLOOD COAGULATION CASCADE (BY SIMILARITY).
COMMON TO ALL ANNEXIN PROTEINS. A PAIR OF THESE REPEATS MITH A CONSENSUS SEQUENCE COMMON TO ALL ANNEXIN PROTEINS. OF THE ANNEXIN FAMILY.
COMED SITE FOR CALCIUM AND PHOSPHOLIPID.
COMMON TO ALL ANNEXIN.
CHILARITY: TO OTHER PROTEINS OF THE ANNEXIN FAMILY.
